

5 REASONS OEMS CHOOSE DATAKEY ELECTRONICS

1

Rugged & Reliable

- Used successfully in extreme environments
- High cycle life
- Chemical & ESD Resistant
- Run over with a semi-truck—and they still work!
- Proven for over 30 years

DK Series
in use since
1987!

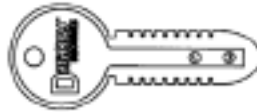

2

Long-Term Availability

- Proven track record of providing OEMs product availability & technical support over *their* program's entire lifetime
- Our products are available, unchanged, for years (*some for nearly 2 decades!*)
- Adopting our solution minimizes the risk of product or firmware re-design due to obsolescence

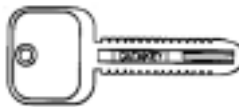

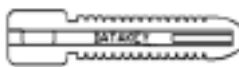

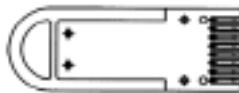

KSD Series in use
since 1991!

3

Unique & Familiar Form Factors

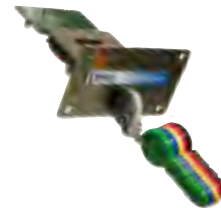

- Ergonomic & intuitive
- Increases your security since other vendor's products can not be used in our Receptacles
- Resale of Keys/Tokens opens a revenue stream for OEM
- Key becomes part of your product's identity

4

Fully Engineered Systems

- 1Kbit to 1GByte
- Full catalog of readily-available products
- Industry standard bus protocols (MW, I2C, SPI, USB) make implementation simple
- One supplier is accountable for both the data carrier and mating Receptacle
- Full line of support peripherals & Development Kits
- Reduces R&D cost, technical risk & time-to-market

5

Superior Service & Custom Capabilities

- Design flexibility to meet your specific needs/requirements
- "Key" supplier to many multi-national companies & governments
- Continually developing new products & product improvements to meet customers' changing needs & security demands
- ProtoKey™ Rapid Prototyping Service
- Experienced in successfully working with engineers to find the best technical & cost-effective solution
